

EMPLOYMENT

Software Quality Engineer	Open Systems International	Aug 2023 – Present
----------------------------------	-----------------------------------	---------------------------

- Won 1st place in company Hackathon for project using AI to identify solar panels in images.
- Create and deploy automated tests using Python/Pytest to reduce manual testing workload.
- Collaborate with management, developers, and product owners to ensure appropriate test coverage.
- Manage Windows and Linux test environment deploys with GitHub, Jenkins, Ansible pipeline.

Full Stack Developer	Voxtelesys	May 2019 – Nov 2022
-----------------------------	-------------------	----------------------------

- Developed customer and employee portals with Vue.js/Node.js/SQL, reducing support calls and increasing resolution speed.
- Created Node.js/MongoDB/Elasticsearch ticketing system with IMAP/SMTP email and calendar integration, enabling support team organization and communication.
- Created graphs with Vue.js/jQuery to display real-time network data, allowing response to incidents within minutes.
- Rewrote graph data backend with Golang/Elasticsearch/Kibana to reduce load on SQL DB.
- Created Electron.js desktop application to spin up and configure VMs, saving support team time.
- Maintained Node.js Rest API web services interfacing with MariaDB, MongoDB, Elasticsearch, and third party APIs.
- Deployed projects using Git/GitLab/Docker/Kubernetes/Nginx to facilitate CI/CD and save developer time.
- Mentored 3 newer developers, enabling them to contribute to the team sooner and more effectively.

Software Developer, Intern	Securian Financial	May 2018 – Aug 2018
-----------------------------------	---------------------------	----------------------------

- Feature development in Java/JavaServer Pages/SQL on web app to increase underwriter productivity.
- Wrote JUnit tests to allow refactoring and minimize technical debt.

Learning Assistant	NDSU Computer Science	Jan 2019 – May 2019
---------------------------	------------------------------	----------------------------

- Used technical communication and professionalism to help students learn computer science concepts.
- Demonstrated proficiency with critical thinking/problem solving while answering questions on the fly.
- Led 2 classes for 50+ students to maintain class schedule while the professor was away.

EDUCATION

Fargo, ND	North Dakota State University	2015 – 2019
------------------	--------------------------------------	--------------------

- B.S. in Computer Science
- GPA: 3.9; *summa cum laude*

PROJECTS

City Learner (2024)	quinnlas.github.io/city-learner
----------------------------	---

- React website that draws the most important roads in any city using the OpenStreetMap API.
- Built and deployed automatically with GitHub Actions and Vite

Guitar Buddy (2023)

- Vue.js/C# ASP.NET Core Minimal API that parses, optimizes, and plays back guitar tabs.
- Implemented Simulated Annealing algorithm in C# to optimize the tab to make it easier to play.
- Implemented unit testing suite with NUnit to ensure parsing algorithm correctness while refactoring.

LANGUAGES AND TECHNOLOGIES

-
- **Proficient:** JavaScript, Vue.js, Node.js, npm, Elasticsearch, Rest APIs, JSON
 - **Moderate:** React, SQL, Python, Java, NoSQL, Git, GitLab, GitHub, CICD, Linux, Unit testing, Bootstrap, XML
